SLIDER W/ QUICK CONNECT VESA PLATE ASSEMBLY

COUNTERBALANCE ADJUSTMENT

16

IMPORTANT!

- Monitor must be on arm
- Arm must be in mount

Press the arm down to approximately parallel with the desk prior to turning the strength adjustment screw.

If the arm **drifts upward**, turn the adjustment screw clockwise.

If the arm **drifts downward**, turn the adjustment screw counter-clockwise.

Depending on the weight of your monitor, **you may have to make 15-20 turns.**

OPTIONAL ADJUSTMENT

In some instances, an additional counterbalance adjustment may be needed to allow the arm's instant height adjustment function to work properly. If your arm is not staying in position after performing step 16, tighten the adjustment screw as shown.

ROTATION FRICTION ADJUSTMENT

17
